

Extruded Package Netting

Extruded Package Netting

Extrusion packaging mesh bags are a revolution in the field of agricultural packaging. These meshes provide an attractive, stronger and durable alternative, and they are heat sealed at one end and cut into pliable bags, allowing for flexible packaging of products. In order to meet the different needs of the market, we manufacture products in various widths, colors and mesh sizes.

Regional Plastic Packaging has played a leadership role in the manufacture and distribution of extruded mesh bags since its introduction 40 years ago. A mesh bag (plastic bag) is a fine mesh bag made of synthetic material. You can use them to transport and export fruits, vegetables, and shellfish. Strong, durable and breathable squeeze mesh bags are available in a variety of colors. Nan Yang Extrusion Mesh Bags have one of the broadest packaging portfolios in the world. We focus on working closely with our clients to identify their specific needs and develop custom solutions for each project.

Our experienced R&D department can design and produce bags with competitive price according to buyer's requirements.

Our professional quality supervision department can ensure good quality and stable shipment for long-term cooperation.

Feature :

- High flexibility compared to traditional materials.
- To facilitate ventilation of packaged goods.
- Sturdy material provides better protection.
- Can be easily molded into attractive packaging.

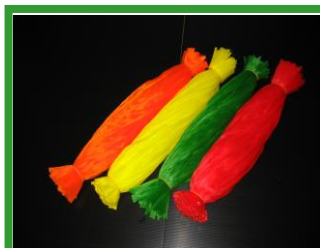

Applications :

- Ideal for packaging.
- fruit.
- vegetable.
- Sea Food.
- Toys.
